

Deus Ex Machina

Computer-Assisted Formalization of Gödel's Proof of God's Existence

Christoph Benzmüller and Bruno Woltzenlogel Paleo

6th of November 2013

$$\frac{\text{Axiom 3} \quad \frac{\overline{\forall \varphi. [P(\varphi) \rightarrow \Diamond \exists x. \varphi(x)]}}{\overline{P(G) \rightarrow \Diamond \exists x. G(x)}} \text{Theorem 1}}{\Diamond \exists x. G(x)} \rightarrow_E \forall_E$$

A gift to **Priest Edvaldo** and his church in Piracicaba, Brazil

Formel von Kurt Gödel: Mathematiker bestätigen Gottesbeweis

Von Tobias Hürtler

Kurt Gödel (um das Jahr 1935): Der Mathematiker hielt seinen Gottesbeweis Jahrzehntlang geheim
picture-alliance/ Imagoeconomica/ Wiener Stadt- und Landesbibliothek

Ein Wesen existiert, das alle positiven Eigenschaften in sich vereint. Das bewies der legendäre Mathematiker Kurt Gödel mit einem komplizierten Formelegebilde. Zwei Wissenschaftler haben diesen Gottesbeweis nun überprüft - und für gültig befunden.

Montag, 09.09.2013 – 12:03 Uhr

Jetzt sind die letzten Zweifel ausgeräumt: Gott existiert tatsächlich. Ein Computer hat es mit kalter Logik bewiesen - das MacBook des Computerwissenschaftlers Christoph Benzmüller von der Freien Universität Berlin.

A Long History

pros and cons

Anselm's notion of God:

“God is that, than which nothing greater can be conceived.”

Gödel's notion of God:

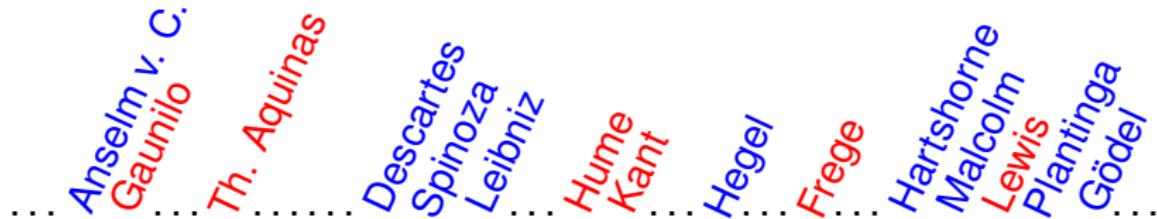

“A God-like being possesses all ‘positive’ properties.”

To show by logical reasoning:

“(Necessarily) God exists.”

A Long History

pros and cons

Anselm's notion of God:

"God is that, than which nothing greater can be conceived."

Gödel's notion of God:

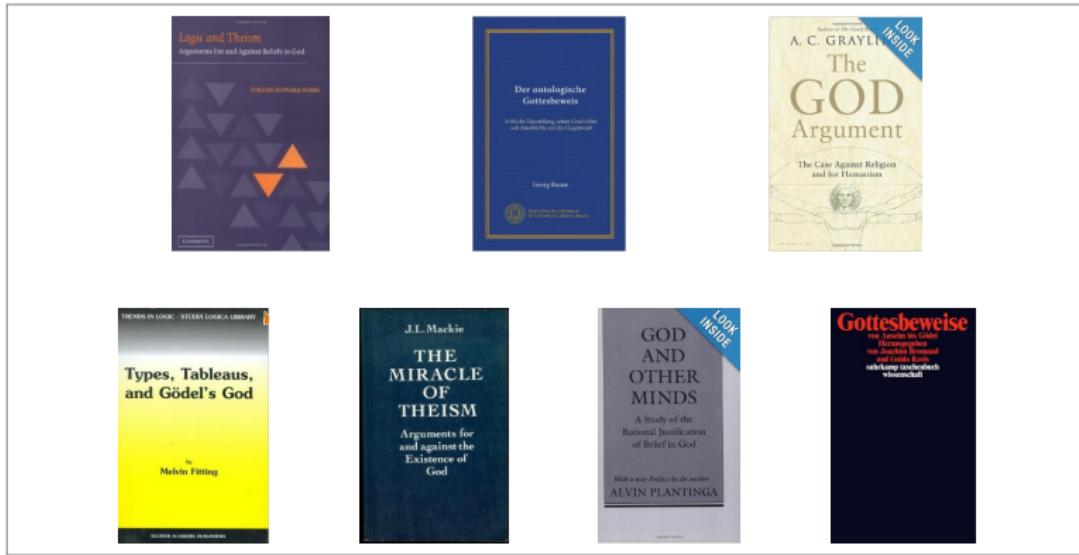

"A God-like being possesses all 'positive' properties."

To show by logical reasoning:

"(Necessarily) God exists."

Wohl eine jede Philosophie kreist um den ontologischen Gottesbeweis

(Adorno, Th. W.: Negative Dialektik. Frankfurt a. M. 1966, p.378)

- Philosophical:
 - Limits of metaphysics & epistemology
 - *Metaphysical* versus *logical* necessary existence
- Theological:
 - Investigations of the nature of God
 - Arguments to convince atheists
- Computational: can automated reasoners be used ...
 - ... to formalize the definitions, axioms and theorems?
 - ... to verify the arguments step-by-step?
 - ... to fully automate (sub-)arguments?

“Computer-assisted Theoretical Philosophy”

Gödel's Manuscript: 1930's, 1941, 1946-1955, 1970

Ontologischer Beweis

FEB 10, 1970

$P(\varphi)$: φ is positive ($\Leftrightarrow \varphi \in P$)

At 1: $P(\varphi), P(\psi) \Rightarrow P(\varphi \wedge \psi)$ At 2: $P(\varphi) \wedge P(\neg \varphi)$

P1: $G(x) \equiv (\varphi)[P(\varphi) \Rightarrow \varphi(x)]$ (Ged.)

P2: $\varphi_{\text{Em},x} \equiv (\psi)[\psi(x) \supset N(y)[\varphi(y) \supset \psi(y)]]$ (Emm. $\forall x$)

$P \supset_N = N(P \supset \varphi)$ Necessity

At 2: $P(\varphi) \supset N P(\varphi)$ $\neg P(\varphi) \supset N \neg P(\varphi)$ } because it follows from the nature of the property

Th.: $G(x) \supset \varphi_{\text{Em},x}$

Df.: $E(x) \equiv \exists \varphi[\varphi_{\text{Em},x} \supset N \exists x \varphi(x)]$ necessary Existence

At 3: $P(E)$

Th.: $G(x) \supset N(\exists y) G(y)$

$(\exists x) G(x) \supset N(\exists y) G(y)$

" $M(\exists x) G(x) \supset M N(\exists y) G(y)$
" $\supset N(\exists y) G(y)$

Me = possibility

any two instances of x are nec. equivalent

exclusive or * and for any number of instances

$M(\exists x) G(x)$: means all pos. propo. w.r.t. com-
patible. This is true because of:

At 4: $P(\varphi), \varphi \supset_N \psi \Rightarrow P(\psi)$ which impl.
~~the system~~ { $x=x$ is positive
~~the system~~ { $x \neq x$ is negative

But if a system S of pos. propo. were incon-
sistent it would mean that the same propo. S (which
is positive) would be $x \neq x$

Positive means positive in the moralistic
sense (independently of the accidental structure of
the world). Only then the at time. It may
also mean "attribution" as opposed to "privatization"
(or containing privation). This is Gödel's problem part

$\neg P(\varphi)$ positive w.r.t. $(\exists x) N \supset \varphi(x)$. Otherwise $\neg P(\varphi) \supset x \neq$
hence $x \neq x$, but we have $x=x$ contrary At.
to the definition of poss. At.

X i.e. the normal form in terms of elem. propo. contains a
member without negation.

A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

A2 A property necessarily implied

by a positive property is positive:

$$\forall\phi\forall\psi[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$$

$$\forall\varphi[P(\varphi) \rightarrow \Diamond\exists x\varphi(x)]$$

T1 Positive properties are possibly exemplified:

D1 A *God-like* being possesses all positive properties:

$$G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$$

$$P(G)$$

A3 The property of being God-like is positive:

C Possibly, God exists:

$$\Diamond\exists xG(x)$$

A4 Positive properties are necessarily positive:

$$\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$$

D2 An *essence* of an individual is

a property possessed by it and

necessarily implying any of its properties: $\phi \text{ ess. } x \leftrightarrow \phi(x) \wedge \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

T2 Being God-like is an essence of any God-like being:

$$\forall x[G(x) \rightarrow G \text{ ess. } x]$$

D3 *Necessary existence* of an individual is

the necessary exemplification of all its essences:

$$NE(x) \leftrightarrow \forall\phi[\phi \text{ ess. } x \rightarrow \Box\exists y\phi(y)]$$

$$P(NE)$$

A5 Necessary existence is a positive property:

T3 Necessarily, God exists:

$$\Box\exists xG(x)$$

Proof Overview

Embedding Modal Logic into Higher-Order Logic

Challenge: No provers for *Higher-order Quantified Modal Logic* (**QML**)

Our solution: Embedding in *Higher-order Classical Logic* (**HOL**)

Then use existing **HOL** theorem provers for reasoning in **QML**

[BenzmüllerPaulson, Logica Universalis, 2013]

Previous empirical findings:

Embedding of *First-order Modal Logic* in HOL works well

[BenzmüllerOttenRaths, ECAI, 2012]

[Benzmüller, LPAR, 2013]

QML $\varphi, \psi ::= \dots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x \varphi \mid \exists x \varphi \mid \forall P \varphi$

- Kripke style semantics (possible world semantics)

HOL $s, t ::= C \mid x \mid \lambda x s \mid s t \mid \neg s \mid s \vee t \mid \forall x t$

- various theorem provers exist

interactive: Isabelle/HOL, HOL4, Hol Light, Coq/HOL, PVS, ...

automated: TPS, LEO-II, Satallax, Nitpick, Isabelle/HOL, ...

QML $\varphi, \psi ::= \dots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x \varphi \mid \exists x \varphi \mid \forall P \varphi$

HOL $s, t ::= C \mid x \mid \lambda x s \mid s t \mid \neg s \mid s \vee t \mid \forall x t$

Ax

QML φ, ψ ::= ... | $\neg\varphi$ | $\varphi \wedge \psi$ | $\varphi \rightarrow \psi$ | $\Box\varphi$ | $\Diamond\varphi$ | $\forall x \varphi$ | $\exists x \varphi$ | $\forall P \varphi$

$$\text{HOL} \qquad \qquad s, t ::= C \mid x \mid \lambda x s \mid s t \mid \neg s \mid s \vee t \mid \forall x t$$

QML in HOL: QML formulas φ are mapped to HOL predicates $\varphi_{\mapsto o}$

\neg	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\neg\varphi w$
\wedge	$=$	$\lambda\varphi_{t \rightarrow o}\lambda\psi_{t \rightarrow o}\lambda w_t(\varphi w \wedge \psi w)$
\rightarrow	$=$	$\lambda\varphi_{t \rightarrow o}\lambda\psi_{t \rightarrow o}\lambda w_t(\neg\varphi w \vee \psi w)$
\forall	$=$	$\lambda h_{\gamma \rightarrow (t \rightarrow o)}\lambda w_t\forall d_\gamma hdw$
\exists	$=$	$\lambda h_{\gamma \rightarrow (t \rightarrow o)}\lambda w_t\exists d_\gamma hdw$
\Box	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\forall u_t(\neg rwu \vee \varphi u)$
\Diamond	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\exists u_t(rwu \wedge \varphi u)$
valid	$=$	$\lambda\varphi_{t \rightarrow o}\forall w_t\varphi w$

Ax

QML $\varphi, \psi ::= \dots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x \varphi \mid \exists x \varphi \mid \forall P \varphi$

$$\text{HOL} \qquad \qquad s, t ::= C \mid x \mid \lambda x s \mid s t \mid \neg s \mid s \vee t \mid \forall x t$$

QML in HOL: QML formulas φ are mapped to HOL predicates $\varphi_{\mapsto \rightarrow}$

\neg	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\neg\varphi w$
\wedge	$=$	$\lambda\varphi_{t \rightarrow o}\lambda\psi_{t \rightarrow o}\lambda w_t(\varphi w \wedge \psi w)$
\rightarrow	$=$	$\lambda\varphi_{t \rightarrow o}\lambda\psi_{t \rightarrow o}\lambda w_t(\neg\varphi w \vee \psi w)$
\forall	$=$	$\lambda h_{\gamma \rightarrow (t \rightarrow o)}\lambda w_t\forall d_\gamma hdw$
\exists	$=$	$\lambda h_{\gamma \rightarrow (t \rightarrow o)}\lambda w_t\exists d_\gamma hdw$
\Box	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\forall u_t(\neg rwu \vee \varphi u)$
\Diamond	$=$	$\lambda\varphi_{t \rightarrow o}\lambda w_t\exists u_t(rwu \wedge \varphi u)$
valid	$=$	$\lambda\varphi_{t \rightarrow o}\forall w_t\varphi w$

Ax

The equations in `Ax` are given as axioms to the `HOL` provers!

Example

QML formula

QML formula in HOL

expansion, $\beta\eta$ -conversion

expansion, $\beta\eta$ -conversion

expansion, $\beta\eta$ -conversion

$\diamond \exists x G(x)$

valid $(\diamond \exists x G(x))_{t \rightarrow o}$

$\forall w_t (\diamond \exists x G(x))_{t \rightarrow o} w$

$\forall w_t \exists u_t (rwu \wedge (\exists x G(x))_{t \rightarrow o})$

$\forall w_t \exists u_t (rwu \wedge \exists x Gxu)$

What are we doing?

In order to prove that φ is valid in QML,

→ we instead prove that valid $\varphi_{t \rightarrow o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

Expansion:

user or prover may flexibly choose expansion depth

Example

QML formula

QML formula in HOL

expansion, $\beta\eta$ -conversion

expansion, $\beta\eta$ -conversion

expansion, $\beta\eta$ -conversion

$\diamond \exists x G(x)$

valid $(\diamond \exists x G(x))_{t \rightarrow o}$

$\forall w_t (\diamond \exists x G(x))_{t \rightarrow o} w$

Automated Proof Search and Consistency Check

- all accept TPTP THF Syntax [SutcliffeBenzmüller, J.Form.Reas, 2009]
 - can be called remotely via SystemOnTPTP at Miami
 - they significantly gained in strength over the last years
 - they can be bundled into a combined prover **HOL-P**

Exploit HOL with Henkin semantics as metalogic
Automate other logics (& combinations) via semantic embeddings
— HOL-P becomes a **Universal Reasoner** —

Proof Automation and Consistency Checking: Demo!

```
MacBook-Chris % Terminal — bash — 125x32

Isabelle

Isabelle

UNIVERSITY OF CAMBRIDGE Computer Laboratory

TUM TECHNISCHE UNIVERSITÄT MÜNCHEN

What is Isabelle?

Isabelle is a generic proof assistant. It allows mathematical formulas to be expressed in a formal language and provides tools for proving those formulas in a logical calculus. Isabelle is developed at University of Cambridge ([Larry Paulson](#)), Technische Universität München ([Tobias Nipkow](#)) and Université Paris-Sud ([Makarius Wenzel](#)). See the [Isabelle overview](#) for a brief introduction.

Now available: Isabelle2013

Download for Mac OS X

Download for Linux Download for Windows

Some highlights:

- Improvements of Isabelle/Scala and Isabelle/Edit Prover IDE.
- Advanced build tool based on Isabelle/Scala.
- Updated manuals: Isar-ref, implementation, system.
- Pure: improved support for block-structured specification contexts.
- HOL tool enhancements: Sledgehammer, Lifting, Quickcheck.
- HOL library enhancements: HOL-Library, HOL-Probability, HOL-Cardinals.
- HOL: New BNF-based (co)datatype package.
- Improved performance thanks to PolyML 5.5.0.

See also the cumulative [NEWS](#).

Distribution & Support

Isabelle is distributed for free under the BSD license. It includes source and binary packages and documentation, see the detailed [installation instructions](#). A vast collection of Isabelle examples and applications is available from the [Archive of Formal Proofs](#).

Support is available by ample [documentation](#), the [Isabelle Community Wiki](#), and the following mailing lists:

- isabelle-users@cl.cam.ac.uk provides a forum for Isabelle users to discuss problems, exchange information, and make announcements. Users of official Isabelle releases should [subscribe](#) or see the [archive](#) (also available via [Google groups](#) and [Narkive](#)).
- isabelle-dev@in.tum.de covers the Isabelle development process, including intermediate repository versions, and administrative issues concerning the website or testing infrastructure. Early adopters of [repository versions](#) should [subscribe](#) or see the [archive](#) (also available at [mail-archive.com](#) or [gmane.org](#)).

Last updated: 2013-03-09 12:21:39

Isabelle/HOL (Cambridge University/TU Munich)

- HOL instance of the generic IsABELLE proof assistant
- User interaction and proof automation
- Automation is supported by SLEDGEHAMMER tool
- Verification of the proofs in IsABELLE/HOL's small proof kernel

What we did?

- Proof automation of Gödel's proof script (Scott version)
- SLEDGEHAMMER makes calls to remote THF provers in Miami
- These calls suggest respective calls to the METIS prover
- METIS proofs are verified in IsABELLE/HOL's proof kernel

See the handout (generated from the Isabelle source file).

Automation & Verification in Proof Assistant IsABELLE/HOL

The screenshot shows the Isabelle/HOL proof assistant interface. The main window displays the theory file `GoedelGod.thy` (modified). The code includes corollaries, sledgehammer proofs, and text blocks explaining the introduction of symbols like 'essence' and 'NECESSARY EXISTENCE'. A yellow highlight covers the section where Sledgehammer and Metis prove theorem T2. The status bar at the bottom shows the progress "Sledgehammering...".

```
corollary C: "[o (E G)]"
sledgehammer [provers = remote_leo2] by (metis A3 T1)

text {* Axiom @{text "A4"} is added: $\forall \phi [P(\phi) \rightarrow \Box \; ; \; P(\phi)]$ 
(Positive properties are necessarily positive). *}

axiomatization where A4: "[!! (\lambda\Phi. P \Phi m⇒ □ (P Φ))"

text {* Symbol @{text "ess"} for 'Essence' is introduced and defined as

$$\diamond \Box (A \vee \neg A) \quad \Box (A \vee \neg A)$$

logical necessity ~ validity

for all $M, M \models F \rightarrow \Box F$

logical possibility ~ satisfiability

exists $M, M \models F \rightarrow \diamond F$

What about iterations?

$$\diamond \Box \diamond \diamond F$$

weak intuitions \Rightarrow dozens of modal logics

S5 is considered adequate

(But KB is sufficient!)

$$\forall P. [\diamond \Box P \rightarrow \Box P]$$

If something is possibly necessary, then it is necessary.

$$\diamond \Box (A \vee \neg A) \quad \Box (A \vee \neg A)$$

logical necessity ~ validity

for all $M, M \models F \rightarrow \Box F$

logical possibility ~ satisfiability

exists $M, M \models F \rightarrow \diamond F$

What about iterations?

$$\forall P. [P \rightarrow \Box P]$$

Everything that is the case is so necessarily.

Follows from T2, T3 and D2.

There are no *contingent truths*.

Everything is determined.

There is no free will.

Many proposed solutions: Anderson, Fitting, Hájek, ...

$$\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$$

Either a property is positive or its negation is (but never both)

Are the following properties positive or negative?

$$\lambda x.G(x) \quad \lambda x.E(x) \quad \lambda x.x = x \quad \lambda x.\top$$

$$\lambda x.blue(x) \quad \lambda x.red(x) \quad \lambda x.human(x)$$

Solution:

“...positive in the moral aesthetic sense (independently of the accidental structure of the world). Only then the ax. true.”

- Gödel, 1970

$$\forall \phi [P(\neg\phi) \leftrightarrow \neg P(\phi)]$$

Either a property is positive or its negation is (but never both)

Are the following properties positive or negative?

$$\lambda x.G(x) \quad \lambda x.E(x) \quad \lambda x.x = x \quad \lambda x.\top$$

$$\lambda x.blue(x) \quad \lambda x.red(x) \quad \lambda x.human(x)$$

Solution:

“...positive in the moral aesthetic sense (independently of the accidental structure of the world). Only then the ax. true.”

- Gödel, 1970

Conclusions

The (**new**) insights we gained from experiments include:

- Logic K sufficient for T1, C and T2
- Logic S5 *not* needed for T3
- Logic KB sufficient for T3 (not well known)
- We found a simpler new proof of C
- Gödel's axioms (without conjunct $\phi(x)$ in D2) are inconsistent
- Scott's axioms are consistent
- For T1, only half of A1 (A1a) is needed
- For T2, the other half (A1b) is needed

- Contributions to the theorem proving community include
 - Powerful infrastructure for reasoning with QML
 - A (new?) natural deduction calculus for higher-order (intuitionistic) modal logic
 - Difficult new benchmark problems for HOL provers
 - Huge media attention
- Interesting bridge between CS, Philosophy and Theology
- Major step towards **Computer-assisted Theoretical Philosophy**
 - see also Ed Zalta's *Computational Metaphysics* project at Stanford University and John Rushby's formalization of Anselm's proof using PVS
 - remember Leibniz' dictum — *Calculemus!*

- Formalize and verify other ontological arguments
 - ... particularly the criticisms and improvements
- Experiment with other embeddings (e.g. varying domains)
- Eliminate and introduce cuts

I'm sure that God would be impressed with your proof, if only he existed :-)

Larry

Die Philosophen können so schön staunen.

Sie packen Dinge in Begriffe (gucken dabei in die Luft) werfen die Begriffe dann in ihre Philosophiekiste, schütteln ganz dolle, und freuen sich, dass ganz genau rauskommt, was sie vorher reingetan haben. Und das geht sogar, wenn eine Maschine die Kiste schüttelt.

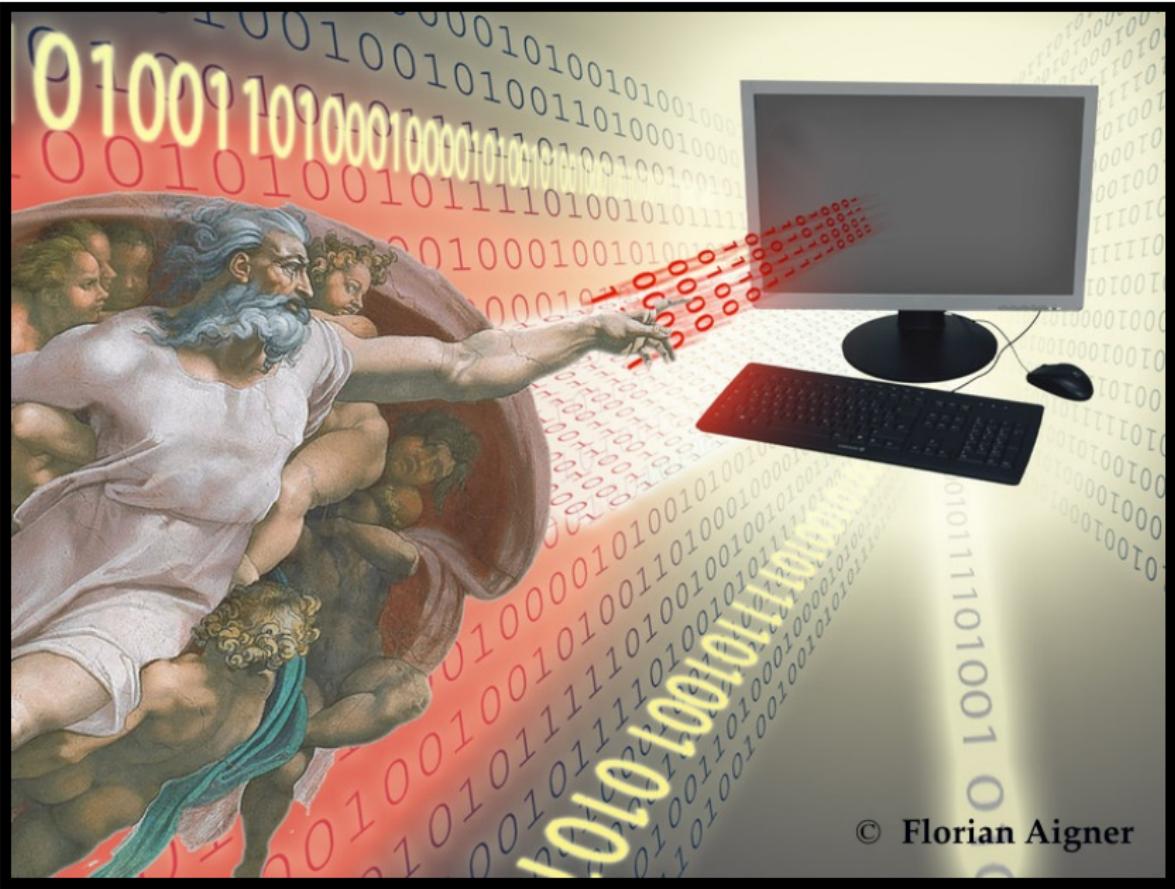

Unerstaunt
2017cp

60. Suchlauf

 souveränsatt 09.09.2013

man kann auch auf andere Weise in diesem Zusammenhang methodisch vorgehen:
bei einer längeren Autofahrt das Radio auf automatischen Suchlauf stellen. Nach zwei Tagen sieht man Gott
